

## CONSENT COLLECTION TEXT FOR AN ONAVITAL WRISTBAND

<input type="checkbox"/>	I consent to Onalabs processing my personal data, including physiological and health data, for the purpose of structuring and displaying it in the OnaVital app. See consent <a href="#">information</a> .
--------------------------	--

For more information on the processing of personal data carried out by OnaVital, please refer to the [privacy policy](#).

### CONSENT INFORMATION

Onalabs Inno-hub, S.L. (Onalabs), aims to help users monitor their vital signs through the OnaVital+ (OnaVital) application. Taking this purpose into account, the use of OnaVital necessarily means that Onalabs processes physiological and health data of users who use the OnaVital bracelet.

If you are interested in using the bracelet and linking it to OnaVital you should know that:

The processing of physiological and health data will be governed by the provisions of this document, the information of which is further covered in the [privacy policy](#).

The data monitored are the following: pulse, oxygen saturation, systolic blood pressure, diastolic blood pressure and skin temperature. The information is collected through the wristband linked to OnaVital used by the user. This wristband will send the information to OnaVital to make it available to the user. This processing includes the processing of physiological and health data.

OnaVital is a solution that seeks to monitor in real time and in a non-invasive way the main physical parameters for the health care of its users, and allows detecting anomalies in the data it monitors and alerting when values are reached that are outside the ranges determined as normal for a standard person.

The legal basis for this processing is the explicit consent provided by the user prior to linking the wristband to OnaVital, we remind you that consent can be withdrawn at any time, without affecting the data processing carried out prior to the withdrawal.

Participants' data will be kept for as long as they are necessary to fulfil the purposes indicated and will be deleted once the purpose has been exhausted. In any case, the physiological and health data collected by the bracelet and displayed in OnaVital will be deleted once the user profile linked to the bracelet is cancelled.

Personal data will not be provided to third parties, except to those providers who are essential for the operation of the tool and who are considered to be data processors.

OnaVital allows users who have an OnaVital bracelet linked to their profile to authorize other users to access vital signs monitoring data. The purpose of this function is for caregivers or healthcare professionals to be able to track the health data of the user with a linked wristband, and it is this user who is solely responsible for authorizing or denying access to the data. Onalabs is not responsible for the processing of data that may be carried out by authorized users.
